# ISSUE VERIFIABLE DIGITAL RECORDS

Edbit provides a complete system to issue official records using a blockchain-anchored format that is instantly verifiable anywhere in the world.

[schools](#)

# WHY BLOCKCHAIN?

Blockchains offer a new public infrastructure for verifying credentials in a manner far more durable, secure and convenient than relying upon a single authority.

## IMPROVE EFFICIENCY

Blockchain-anchored records don't require middlemen to send or verify.

## PREVENT FRAUD

Make it hard to impersonate records from your organization with cryptographic signatures.

## PROMOTE AWARENESS

Draw attention to your programs and your brand with records that can be shared online

## INCREASE SECURITY

Know that records are secure, tamper proof and vendor independent.

## PROVIDE OWNERSHIP

Empower recipients with records they own and can have verified anywhere.

## GAIN INSIGHT

Build reports to better understand your credentialing trends.

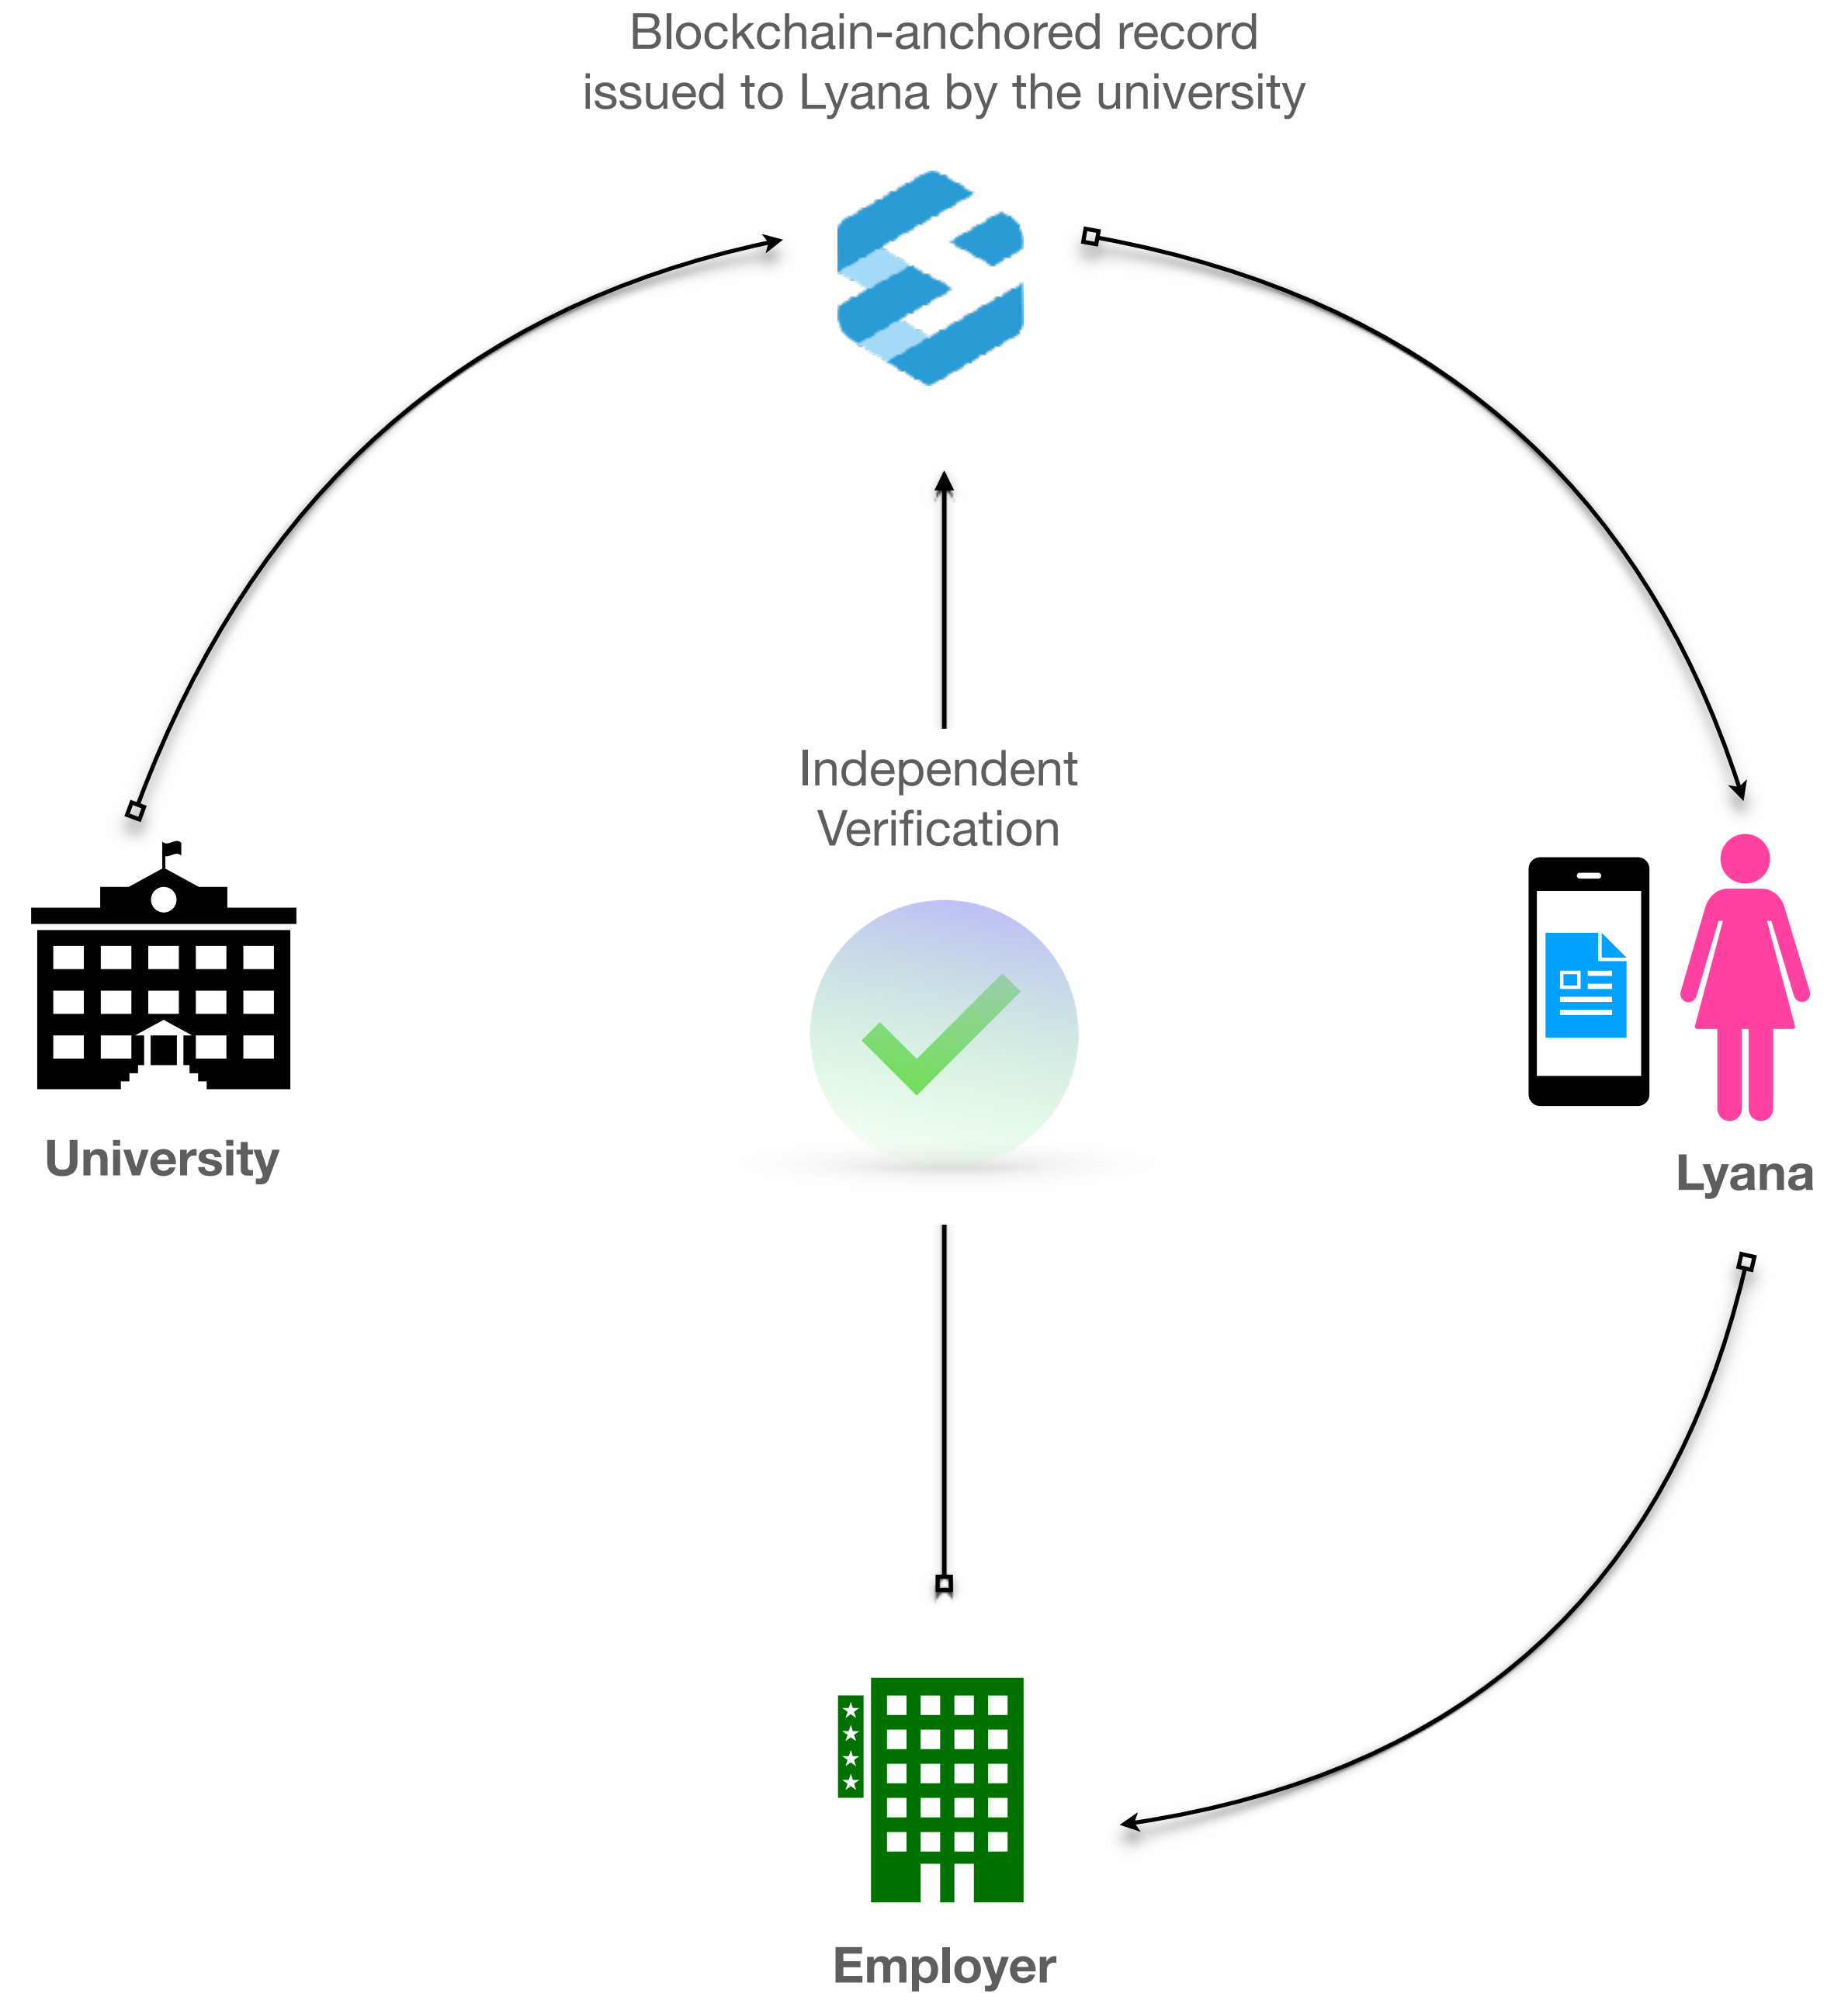

# HOW DOES IT WORK?

## IMAGINE

Lyana has recently graduated from college and receives an official copy of her digital diploma, issued by the university containing her keys. She can choose to present her diploma to anyone—like a potential employer—who can independently verify the issuer of the diploma, the time of issuance and its status (valid, expired or revoked).
